

Fayette Furnace Company Inc. FFC
The areas oldest and most reliable heating and cooling contractor!
Established in 1920
Employee owned and operated
Specializing in Carrier equipment (World renowned)

Today's heating and cooling equipment is much more sophisticated than the standard furnace and air conditioning units you have in your home now.

Today's equipment is manufactured using the most advanced technology, bringing the most advanced comfort to your home.

Gone are the days of just turning the old Honeywell thermostats up or down.

Today's home comfort systems start at your finger tips, utilizing the most advanced controls with the most advanced heating and cooling systems to bring you the most advanced comfort to your home!

Innovation has brought the same advancements to the HVAC industry as the automobile and cellular industries.

Think about this!

How many cell phones have you purchased over the last 10 years?

How many vehicles have you purchased over in the last 10 years?

How many heating and cooling systems have you purchased in the last 10 years?

If you had purchased, let's say 6 cell phones in the last 10 years at a cost of \$300.00 each, you would have spent \$1,800.00.

Now add the monthly service fees of \$100.00 per month X 12 months = \$1,200.00

\$1,200.00 a year X 10 Years = \$12,000.00

Now add the \$1,800.00 + \$12,000.00 = \$13,800.00 this is what you have spent over the last 10 years on cell phones.

The average home owner/consumer over the course of the last 10 years has purchased 4 vehicles!

The average cost of a vehicle is \$25,000.00 X 4 = \$100,000.00

Add in the cost of gasoline \$20.00 per week over 52 weeks or 1 year = \$1,040.00

\$1,040.00 X 10 years = \$10,400.00

The average cost of Auto insurance \$600.00 per year X 10 years = \$6,000.00

\$100,000.00 plus \$10,400.00 plus \$6,000.00 = \$116,400.00 this is the cost of owning and operating these vehicles over 10 years excluding maintenance and tires.

You could have purchased a modest home in our area for this cost.

Most home owners are still using the same heating and cooling system that was in their house 10 years ago.

Let's look at the cost of heating and cooling your home over this same 10 year period!

On the average a home owner will spend \$150.00 per month depending on the types of energy used and the size of the house.

Take the \$150.00 X 12 months and you have paid \$1,800.00 over the course of the year.

Now let's take that \$1,800.00 X 10 years and you are at \$18,000.00 for that ten year period of time.

Now I'd like you to think about this for your home.

The average cost of replacing the heating and cooling system runs between \$8,000.00 and \$15,000.00 depending on the size of your home and the system you decide is best for you and your home.

With today's technology the systems are manufactured to save as much as 50% over the cost of heating your home with the older less efficient systems.

So if you were paying \$18,000.00 for heating and cooling your home over the course of 10 years your savings could be as much as \$9,000.00.

So if you put a new system in your home at a cost of between \$8,000.00 and \$15,000.00 you would be able to pay \$9,000.00 out of the savings in energy saved!

Now your comfort and utility costs would be greatly improved!

That is one heck of a return on the dollar!

Which of the other investments you have made improved your comfort and reduced your expenses in this manner?

FFC "Fayette Furnace Company Inc."- We are here to provide you the knowledge and understanding of how to improve your homes comfort in the most efficient way!

We are not your everyday heating and cooling contractor!

We are the future!
